

# Working Together To Build a Better Future

Michigan families deserve innovative, accessible energy solutions that protect the environment. That's why Consumers Energy and its partners are excited to announce a new pilot program focused on building high-performance, all-electric new homes that integrate clean energy technologies for all homeowners.

The program will serve as a model for how Michigan can implement sustainable energy technologies to serve our communities and protect the planet.

The **New Home Electrification pilot** aims to make energy more affordable and help customers and home builders better understand clean energy.

**Interested?** Reach out to us for more information at [energysavers@icf.com](mailto:energysavers@icf.com) or 866-490-7213.

## Each home features:

- Industry-leading heat pump HVAC system
- Intelligently designed rooftop solar system
- ENERGY STAR® certified appliances
- Comprehensive air sealing and premium insulation

**Without our partners,  
the New Home  
Electrification pilot  
would not be possible.**

- Home Builders Association of Western Michigan
- Kalamazoo Foundation for Excellence
- Kalamazoo Neighborhood Housing Services
- Landmark Homes of Michigan, Martz Home Builders and Osborne Construction & Maintenance
- Local Initiatives Support Corporation Kalamazoo
